

A/V Converters

Maestro converters help solve compatibility issue between many new and older models of equipment. Computers, game consoles and many other components can now be connected and be fully functional with more current state-of-the-art equipment. Maestro converters also work to bring newer technologies into compatibility with older equipment, as in the case of the MC-1. Digital audio is reduced to Analogue audio to be used with standard equipment and headphones.

MAESTRO HD
A/V Converters

DIGITAL TO ANALOG AUDIO CONVERTER

MC1

- Toslink or coaxial digital audio inputs
- Sampling rate 32, 44.1, 48 and 96 KHz
